

Industrial Rooflights & A Low Carbon Future

This CPD is an introduction to the impact that industrial rooflights can have on logistics buildings, other warehousing and factories. It examines the key performance criteria in terms of regulations and carbon reduction targets.

It is suitable for architects, building owners, developers and main contractors working on logistics buildings, other warehousing and factories.

Topics covered include:

- Brett Martin Group & sustainability
- BREEAM
- Industrial rooflights and GRP
- Embodied and Operational Carbon
- Carbon reduction targets
- Rooflights and low carbon buildings
- Light transmission
- Sustainability benefits of natural light
- Building regulations and natural light
- Rooflights and CO₂ emissions
- Non-fragility and Embodied Carbon
